

Cargo Throwover Net

Cessna 310

Introduction

The **Aeronautical Engineers Australia** Cessna 310 Cargo Throwover Net is applicable for use on most 310 model aircraft. The net allows the aircraft cabin to be used for cargo carrying operations, securing goods behind the crew seats.

Modifications

The throwover net attaches to the existing aircraft D-rings, hardpoints and seat tracks and uses a Cordura mesh between the webbing to restrain small articles. This gives a maximum load bearing capacity of up to 350 kg or 772 lbs and can be easily removed for conversion to passenger carrying or other configurations.

The supplied kit contains the throwover net, shackles and all supporting documentation for CASA Australia approval. Separate approval is required for FAA, JAA or other international air safety jurisdictions. The aircraft may also require an approved loading system for cargo operations. This net requires a number of seat track clamps, which can be supplied upon request.

Installation View

Experience

Aeronautical Engineers Australia has over 30 years of experience in the design and manufacture of aircraft systems and has installed these systems on a wide range of aircraft with numerous examples in service around Australia.
